

TUNISIAN REPUBLIC

**MINISTRY OF HIGHER EDUCATION AND SCIENTIFIC
RESEARCH**

UNIVERSITY OF KAIROUAN

**HIGHER INSTITUTE OF APPLIED SCIENCE AND
TECHNOLOGY IN KASSERINE**

MEMORY

Presented for graduation from:

Research Master

Specialty:

Nanomaterial and Embedded Electronics

Option:

Embedded electronics

By:

MEHER BOULAABI

Subject:

Dashboard for Systems Fault Prediction and Classification

Presented to the jury on 07/03/2024, consisting of:

Dr. Saidi BOUZIDI (Associate Professor at ISSAT-KASSERINE)	President
Dr. Wajdi SAADAoui (Assistant Professor at ISSAT-GAFSA)	Reporter
Dr. Mansour HAJJI (Assistant Professor at ISSAT-Kasserine)	Supervisor
Dr. Vicenç PUIG (Full Professor at UPC-Barcelona)	Co-Supervisor
Dr. Majdi MANSOURI (Associate Research Scientist at Texas A&M University at TAMU-QATAR)	Co-Supervisor

DEDICATIONS

To my dear parents : Noureddine BOULAABI and Anes NASRI

For all your sacrifices, unwavering love, boundless tenderness, steadfast support, and heartfelt prayers that have guided me through my educational journey..

To my dear brothers : Mourad BOULAABI and Anis BOULAABI

For your constant encouragement and unwavering moral support, helping me overcome challenges and reach for the stars.

To my dear friends : Housseem MNASSRI , Ghada RHIMI and Hasna MASSAOUDI

For your enduring friendship, support, and motivation that have been my pillars of strength, inspiring me to push my boundaries and achieve my goals.

To all my family,

For standing by my side, offering endless support, and believing in my dreams throughout my university career. Your collective presence has been my greatest source of strength and inspiration.

ACKNOWLEDGMENTS

I would like to take this opportunity to thank **Dr. Sayed MISSAOUI** (Associate Professor at ISSAT-KASSERINE), serving as the President of the project, and **Dr. Wajdi SAADAoui** (Assistant Professor at ISSAT-GAFSA), acting as the reporter of the project, for their invaluable contributions and support throughout this endeavor.

I am also indebted to **Dr. Vicenç PUIG** (Full Professor at UPC–Barcelona), my co-supervisor based in Barcelona, for his valuable input and collaboration throughout the research process. His international perspective and technical guidance enriched the scope of my work, and I am grateful for the opportunity to benefit from his mentorship.

Special thanks are extended to **Dr. Majdi MANSOURI** (Associate Research Scientist at Texas A&M University at TAMU-QATAR), for his unwavering support during the stage in Spain. His practical advice, moral encouragement, and assistance during challenging times were invaluable. His mentorship played a crucial role in shaping my understanding and approach to the project.

I would like to express my sincere gratitude to my primary supervisor, **Dr. Mansour HAJJI** (Assistant Professor at ISSAT-Kasserine), whose guidance, support, and expertise played a pivotal role in the successful completion of this report. His dedication to fostering a conducive research environment and his insightful feedback significantly contributed to the quality of this work.

I would like to express my gratitude to the **University of Kairouan** for providing me with the opportunity to undertake this internship. Additionally, I extend my heartfelt thanks to the members there for their assistance during the preparation of the documents.

Your support has been invaluable throughout my academic journey, and I am deeply thankful for the enriching experiences and lessons learned.

ABSTRACT

This study investigates grid-connected photovoltaic systems and fault diagnosis using the Random Forest Classifier. The project initially classified signals in the dataset to detect faults, demonstrating the classifier's effectiveness. To enhance efficiency, a novel approach focused solely on the transitory regime for each fault class, resulting in a remarkable computation time of ***0.008 seconds*** and ***100% accuracy***. This targeted analysis improves real-time fault detection, emphasizing the importance of optimized tools like the Random Forest Classifier. The findings contribute to advancing fault diagnosis techniques, enhancing the safety and efficiency of the photovoltaic industry by preventing potential damage and interruptions.

Keywords: Photovoltaic systems, Fault diagnosis, Random Forest Classifier, Transitory regime, GCPV

RÉSUMÉ

Cette étude explore les systèmes photovoltaïques connectés au réseau et le diagnostic de panne en utilisant le classificateur Random Forest. Le projet a initialement classifié les signaux dans l'ensemble de données pour détecter les défauts. Une approche novatrice s'est concentrée uniquement sur le régime transitoire de chaque classe de défaut, aboutissant à un temps de calcul remarquable de *0,008 secondes* et *une précision de 100%*. Cette analyse ciblée améliore la détection en temps réel des défauts. Le résultat contribue à faire progresser les techniques de diagnostic de panne en améliorant la sécurité et l'efficacité de l'industrie photovoltaïque en évitant les dommages potentiels et les interruptions.

Mots clés : Systèmes photovoltaïques, Diagnostic de panne, Classificateur Random Forest, Régime transitoire, GCPV
